I agree, I have noticed this in past. We can do it next go around, 1997 revision, beginning in Sept. Since we do not have digitizing capabilities at 1:25000 scale what we do is have multiple maps for the same quad. For example, the Juneau B-2 quad would have the normal 1:63360 scale map but then there would be what I have termed "Supplemental maps" at the 1:25000 scale. These would be Juneau B-2 NW SW etc. I have a few other spots I also intend to do this for next year.

This years effort is proceeding slowly. Production of the draft blueline maps was delayed due to cancelation of the states blueline contract with the vendor and the resulting cost increases. Costs for the maps exceeded purchasing authority thereby requiring a bid process. The bid was just let and the new vendor picked up the maps last week. They're supposed to start production this week. This increased cost may further muddy things up by requiring a fiscal note, I'm still checking into that. Additionally, I have all my other duties to tend to. Fun eh! All in all it's a mess. But I'm hoping to have the regs. effective by August at this point.

Let me know if you have any other areas which may need 1:25000 supplemental maps to overcome the crowding concerns. I'll put the Mendenhall Valley on the list for next fall and when the maps are drafted we'll run them by you for verification.

Hi Ed: More questions about the catalog. How is this years update going? Since coming to Juneau I have noticed a major problem in the Mendenhall Valley. Besides the fact that the place is booming, there are a bunch of waterways crammed into this one area. I would like to include a 1:25,000 map of the valley area, it would probably take at least two maps. How did you do this for the Haines and Skagway area? I have copies of the appropriate maps, is it just a matter of transferring the streams off the 1:64,000 or is it more involved? Appreciate any help on this one, thanks. ben
